

## PUBLIC TRANSPORTATION

### Reduce downtime and disruptions

Reliability is the key to running a successful transit system. A proper maintenance program ensures that issues are resolved before they create disruptions and downtime. Clean motors, controllers and electrical equipment are crucial to reliable and high performing operations. Dry ice cleaning provides a non-conductive, environmentally responsible cleaning process that is residue free and creates no secondary waste. It is versatile enough for both delicate cleaning of sensitive electrical equipment without damage and also aggressive enough to remove thick grease and burnt carbon from hard metal surfaces.

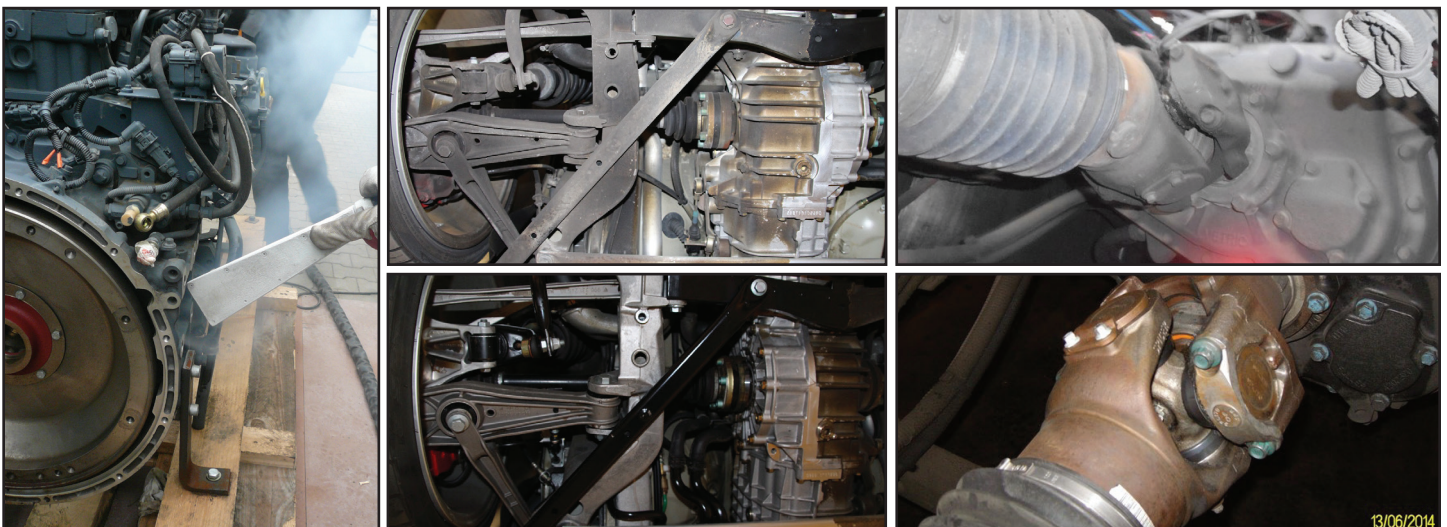

### KEY BENEFITS

- Extend traction motor & cam controller life
- Delicate cleaning without damage
- Eliminate secondary waste
- Reduce failures of controllers & actuators
- Non-corrosive
- Non-conductive
- Environmentally responsible

Traction motors  
Brake controllers  
Cam controller box  
Switch gear

Interior refurbishing  
3rd rail insulators  
Generators  
Diesel motors
